Projects

----

1. Auto Used Spare parts website

🌐 https://www.qasralhasna.ae/

Qasral hasna is auto used spare parts company who have requirement that customer want to see the company website that which product is available I alone handle the whole website design the front-end and the back-end of this website in 2 month of periods cause I have facing too much difficulties I used new language for this I use **NodeJs and EJs** for this project and use database **Mongo Db**, using **Niginx** web server. In this project the client is easily upload his auto parts and easily maintain the spare parts on client demand I make a car menu also to sell his car on this portal.

2. Real Estate project

🌐 Vixion Capital Real Estate

   This project is for Real Estate to put the client properties in this website for selling and rental purpose in this website we adding off plan to add that properties which is upcoming and build very soon I design this website in **Vue js** in this project I work as front-end developer and the back-end work is perform by the back-end developer later the company goes in crisis so they didn't upload the website so therefore the website is not going to live I have the source code of that website.

3. Off plan Project

🌐 Holiday Home Company

This project is design for the client who have too much data and he want a temporary storing data platform I make this off plan project that client store his off plan properties and easily search the property cause I use this project as a search Engine. In this project I use **Angular js, Node js, Express js** and database I use **Mongo Db** also here this website is also available with me in source code.

4. Inventory Management System

🌐 Qasral Hasna Used Spare trade LLC

This project we make it for inventory of Qasral hasna cause they don't have any idea about his inventory so I make this website to store his inventory and remind the thing that this parts is available in his stock in this project I use **Laravel** frame work and the server side language is **php** the database I use for this website is **My sql** and the front end tool as java Script this project is still in process cause I'm doing my best to complete this project and
